

Rbfox1-Flox(SD)

Gene Summary

Model Description

These rats carry loxP sites flanking exon3-6 of Rbfox1. When crossed with a Cre recombinase-expressing strain, this strain is useful in eliminating tissue-specific conditional expression of Rbfox1 gene.

*Literature published using this strain should indicate: Rbfox1-Flox(SD) rats (Cat. NO. NR-CKO-230144) were purchased from Shanghai Model Organisms Center, Inc..
